A failure should not be counted more than one time in items 1, 2, 3, and 4, the failure should be classified under the basic system or appliance of which it forms an essential part. E.g., assume grounds cause a block signal to indicate a false proceed causing corresponding indications of a cab signal system on each train approaching this point, such failures should be included in item 1, Block Systems
A false proceed failure is a failure of a system, device or appliance to indicate or function as intended which results in less restriction than intended

The following abbreviations may be used in the report.

A—Automatic	EM—Electromechanical
AB—Automatic block	EP—Electropneumatic
ACS—Automatic cab signal	FP—False proceed
APB—Absolute permissive block	MB—Manual block
ATC—Automatic train control	M—Mechanical
ATS—Automatic train stop	P—Pneumatic
CL—Color light	PL—Position light
CPL—Color position light	SA—Semiautomatic
E—Electric	TC—Traffic control

NATURE AND CAUSE OF FAILURE CORRECTIVE ACTION TAKEN

A wiring change in the signal control circuit was improperly installed and tested as part of a timing relay replacement. This resulted in the improper display of an approach aspect (yellow, Old Rule 211, Fig. 1, New Rule 213, Fig. 1) with no train on the approach circuit, instead of a Stop and Proceed (red, Old Rule 215, Fig. 1, New Rule 219, Fig. 1). Due to this being a stub-end terminal station, this is a slow speed location. No unsafe incidents occurred. The wiring was corrected, retested, and the signal displays the proper aspects as designed.
